

SETTING UP APPLICATION ENVIRONMENT

Team Id : PNT2022TMID01682

Create a Flask Project:

The screenshot displays a Jupyter Notebook interface with a dark theme. The top pane shows a code editor for a file named `app.py`. The code defines a Flask application with a single route `/` that returns an HTML welcome message. The bottom pane shows the terminal output, which includes a warning about using a development server, startup logs for the Flask server, and HTTP request logs for `GET /` and `GET /favicon.ico`.

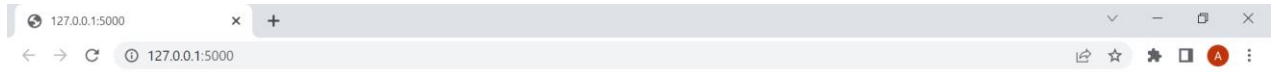

```
app.py 1 X
app.py > home
1  from email.mime import application
2  from flask import Flask;
3
4  app=Flask(__name__)
5
6  @app.route("/")
7
8  def home():
9      return '<h1>Plasma Donor Application - Welcome to IBM project</h1>'
10
11  if __name__=='__main__':
12      app.run(debug=True)
13
```

PROBLEMS 1 OUTPUT DEBUG CONSOLE TERMINAL JUPYTER

WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
